

Ethical and Sustainable Technology Leasing Solutions

InnoVent Leasing is a specialist IT Asset Management organisation, our business is built around the core principle of rental and re-rental of technology in order to maximize the use that technology can deliver. We focus on providing funding solutions to UK organisations for an initial rental period and then we “up-cycle” retired UK assets in our refurbishment facilities in South Africa and re-deploy up-cycled equipment to schools, local communities and businesses in South Africa, Zimbabwe, Zambia, Namibia and Kenya.

Corporate Responsibility is at the heart of our business.

Our aim as an organisation is to reduce waste in the technology industry through a complete lifecycle management service. We help our clients to take care of the environment and give something back to the developing world through the safe and ethical rental and re-rental of technology.

InnoVent supports the sustainable ‘up-cycling’ of technology, up-cycling adds value to redundant UK hardware through repairs and component upgrades in our reconditioning centers.

We recondition and re-lease the majority of the hardware we receive back from UK clients providing affordable access to technology that enables small African businesses and charities to grow their efficiency.

Our unique business model saves UK corporates money, by reducing the total cost of ownership during the primary period of an asset’s life and, after up-cycling by InnoVent, provides affordable computing to developing nations in Africa, while enhancing your corporate responsibility credentials, a genuine **“Win-Win”** for all parties involved.

African Focused.

Throughout South Africa and in other developing world economies in sub Saharan Africa, investment is needed to educate young people. Historical jobs in farming and other land based occupations are rapidly being replaced and we believe that an education centred on ICT will build future entrepreneurs and help the economies in deprived areas grow.

Diyatalawa Community – One Example

“Friends of Diyatalawa” is an example of one of the charitable initiatives in South Africa which the InnoVent Group supports as part of our on-going commitment to reducing technology waste and our focus on the ethical and sustainable use of technology. Diyatalawa is a small community to the North-East of Johannesburg that originated as a farming settlement.

Since employment on farms has fallen in the area, the village has become a pilot for the government-backed Comprehensive Rural Development Programme (CRDP).

The site now contains 50 brick houses with sustainable energy sources, in addition to a school and crèche that provide for surrounding satellite villages.

Qrent, an InnoVent group business provided resource and assistance in refurbishing the community development centre providing the village residents with a much needed computer centre using our reconditioned and up-cycled desktops and laptops which changed the face and use of the dilapidated building.

Ultimately an education in computing and computer maintenance will build skills within the community and increase access to further career opportunities.

InnoVent Leasing is operated and managed by two directors who have over 50 years of experience in the management and funding of IT assets.

Duane Lent, CEO has extensive experience developing business technology solutions, including; information technology hardware and services, leasing and asset management. Throughout Duane's career he has gained exemplary credentials working with respected UK and international technology brands. Duane's thorough understanding of information technology products, together with a vast knowledge of financial tools and techniques, enables him to provide innovative technology solutions to businesses.

Adrian Saint, COO has provided IT managed services and asset management solutions to medium and large corporate clients for over two decades. Adrian is passionate about delivering a leasing model to corporate clients that combines our responsible and ethical approach with his understanding of effective IT funding solutions. Adrian's depth of knowledge and appreciation of technology, and the business benefits it delivers to organisations, is a key ingredient in InnoVent's success.
